

OUTPUT

1.

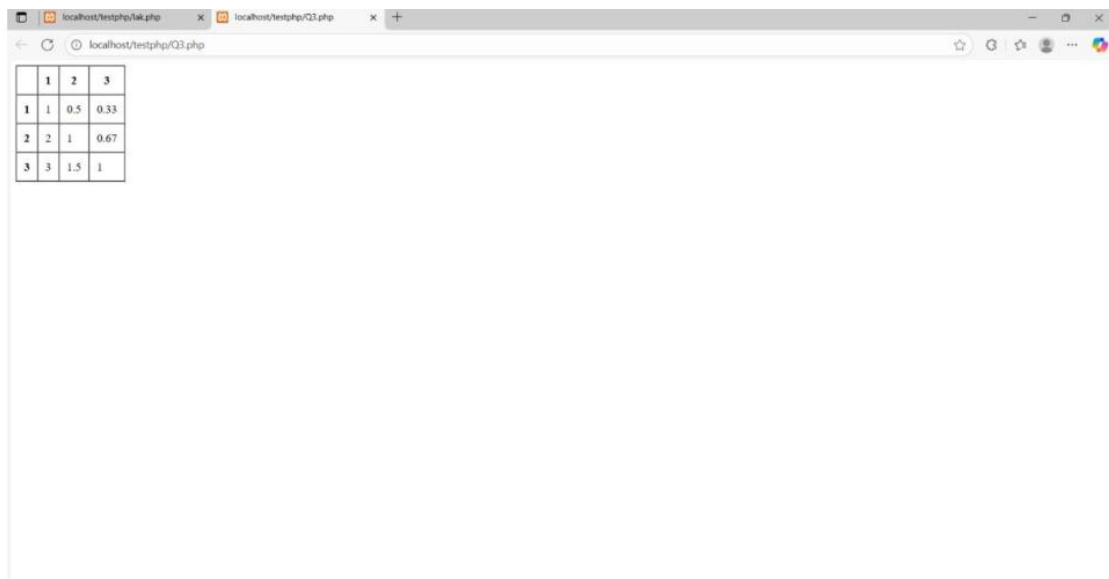

The screenshot shows a web-based PHP editor interface. On the left, a file named 'main.php' is open, containing the following PHP code:

```
1 <?php
2 $capital = 67;
3 print("Variable capital is $capital");
4 print("Variable CaPiTaL is $CaPiTaL");
5 ?>
```

On the right, the 'Output' panel displays the execution results:

```
Variable capital is 67
Warning: Undefined variable $CaPiTaL in /tmp/916h4p4EUT/main.php on line 4
Variable CaPiTaL is
=== Code Execution Successful ===
```

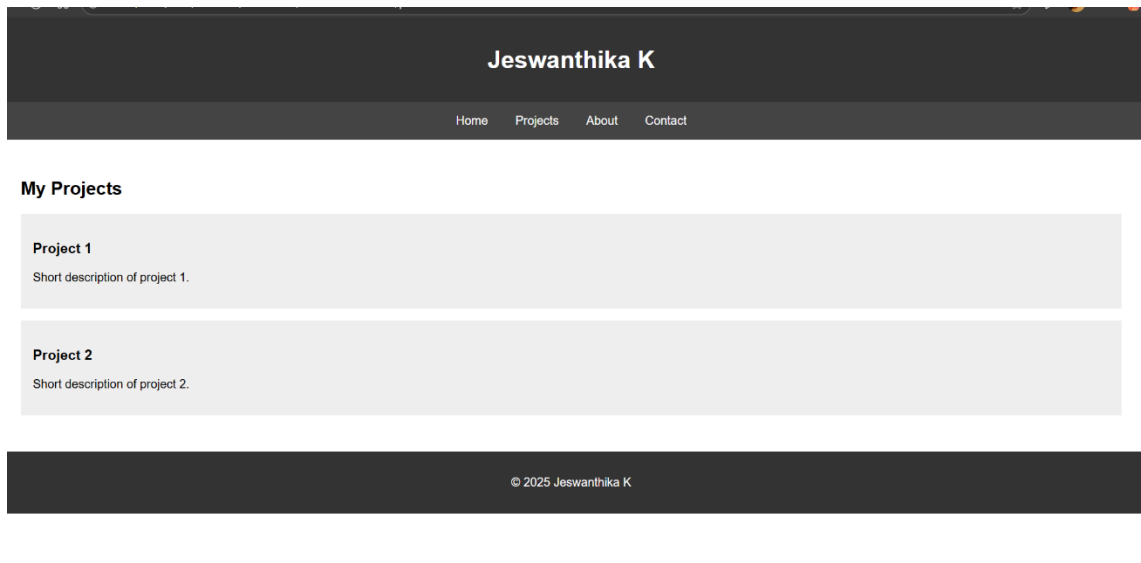

2.

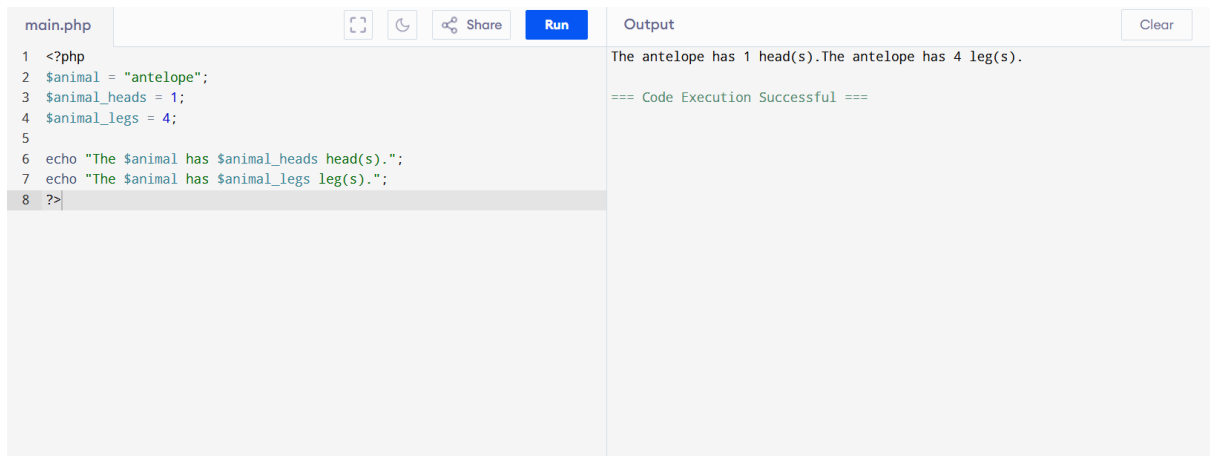

The screenshot shows a web browser window with two tabs. The active tab is 'localhost/testphp/Q3.php'. The browser displays a table with the following data:

	1	2	3
1	1	0.5	0.33
2	2	1	0.67
3	3	1.5	1
